XD-102 Repair Kit For Both XD-30 & EXT-50 DumpMaster Drain Valves

1. Drain all compressed air from air brake system.
2. Remove all airlines connected to the drain valve.
3. Firmly mount the ejector body where it is accessible for the service operation. Either leave it mounted or put it in a vice.
4. Clean the outside of the Moisture Ejector and unscrew both end caps.
5. Undo the nyloc XD-07 nut and remove bolt noting the location and order of all components.
6. Clean and grease the Moisture Ejector bore using the tube of Teflon grease provided. Grease the new seals and the bore of the valve body.
7. Fit the large black seal XD-12 onto the bolt followed by curved spring retainer XD-09 Spindle XD-05 and Spring XD-11 as one assembly.
 - Insert this assembly into the large bore of the Drain Valve body XD-01. It is important that the small end of the spring XD-11 is against the concave face of the curved brass spring retainer XD-09. The end or coil of the spring must not get caught between the curved spring retainer XD-09 and the spindle XD-05.
8. Push on the head of the bolt XD-06 holding the assembly against the compressed spring. The thread of the bolt is now protruding out through to the exhaust side of the Drain Valve body XD-01.
9. Insert the spindle collet XD-08 followed by the greased seal XD-13 with the concave large diameter side towards the Drain Valve body XD-01.
10. Insert the flat washer XD-10 and follow with the nyloc locknut XD-07.
12. Tighten the nut and bolt to 30 inch pounds (2.4ft lbs) (3.5 Newton meter).
13. Move the tightened seal assembly back and forth by hand.
14. Grease both end caps.
15. Fit new O-Rings XD-14 & XD-15 to the Drain Valve body's threaded ends.
16. Reassemble end caps.

PROPER OPERATION OF THIS XD-30 MOISTURE EJECTOR REQUIRES THE UNIT TO BE CLEANED, CHECKED FOR WEAR AND RE-GREASED AT LEAST ONCE EVERY YEAR.

CAUTION: Eye protection must be worn when draining compressed air.
